Profile

Two years on a business web application used daily on desktop and on a phone, as the only designer on the product and as the person who wrote the front-end that shipped. I took selected modules from mapping how they were really used, through design in Figma, to implementation and release, and I built and documented the product's design system. Alongside the interface I worked in the server-side code and in SQL Server, and I use AI coding agents as my normal way of working.

CORE COMPETENCIES

UX: Current-state mapping · Requirements gathering · User roles and permissions · User flows · Information architecture · Wireframing · Prototyping · Developer handoff · Accessibility (WCAG 2.1)

UI and design systems: Figma · Design tokens · Components and their states · Component documentation · Brand guidelines · Dark mode · Typography · SVG icons

Front-end: HTML5 · CSS3 · JavaScript (ES6) · Responsive design from 320 px · Cross-browser testing · Loading and skeleton states · Localisation in four languages

Platform and data: ASP.NET Web Forms · VB.NET · Microsoft SQL Server · T-SQL · Data modelling · Access control

AI: Claude Code · Agent-assisted implementation · Review of generated code · Project context and conventions for agents

Work Experience

Full-Stack Developer & UX Designer

JULY 2024 - MAY 2026

ISAT, s.r.o., Nitra, Slovakia · Part-time alongside studies, hybrid

Design and development of modules of the company's business web application, used daily on desktop and on a phone by office staff, managers and people working outdoors.

ANALYSIS

- Mapped the current state of every module before changing it: **code review, database inspection and a written workflow** of how the module is actually used, rather than how it was meant to be used.
- Received the core improvement requirements from my manager and had a **free hand over the remaining functionality**, including what to propose and what to leave alone.
- Defined **user roles and access rules**: who can see, enter and edit what, and what each role must not be shown.
- Observed online and on-site discovery sessions with client companies, capturing what users needed to record and where the existing screens got in their way.
- Translated findings into scope: what was in, what was missing, what had to be assumed, and what could not be solved yet.

LANGUAGES

Slovak	Native
English	Upper-intermediate (B2)
Czech	Advanced (C1)

SOFT SKILLS

Attention to detail · Analytical thinking · Independence · Ownership · Adaptability · Cross-team collaboration · Comfortable with ambiguity

INTERESTS

Photography and composition · Video games · Sci-fi films · Tech news · Reading · Creative writing · Amateur astronomy

DESIGN (ISAT, continued)

- Produced **user flows, wireframes, prototypes and high-fidelity screens in Figma**, then handed them over as specifications a developer does not have to guess at, including states, roles and exceptions.
- Built and documented the **design system**: primitives and semantic tokens, buttons in three levels plus a destructive variant, inputs and all of their states, modals, cards, tiles, badges, empty and loading states, a focus ring, and a dark mode defined as a second set of values rather than an inversion.
- Designed for **complex data states and content variability**: long filterable record lists, multi-step entry flows, empty and loading states, and behaviour from 320 px to desktop.
- Wrote the **brand guidelines** the team works to, and redrew the company mark and a twelve-icon set as vectors.
- Took designs through feedback rounds, **defended the decisions behind them** and revised what the team pushed back on.

IMPLEMENTATION AND DELIVERY

- Implemented approved designs in the application's front-end: **HTML, CSS and JavaScript** on top of ASP.NET Web Forms, responsive from 320 px to desktop, with WCAG basics in mind including colour contrast and visible focus.
- Wrote server-side code in **VB.NET**: loaded data from SQL Server, rendered it into the module, processed it into statistics and calculations, and saved and updated user-entered records.
- Contributed to **database design** by proposing the tables and columns a new feature needed, and writing the queries behind the screens.
- Reduced full-page postbacks and added **loading and skeleton states** so the interface stays responsive and an empty page is never mistaken for a fault.
- Replaced browser dialogs with the product's own messages, since a browser may suppress repeated dialogs and a failure could otherwise pass unnoticed.
- Built and maintained the product in **four languages**, including the screens through which the translations themselves are edited.
- **Tested on different devices and browsers** before release, and fixed what the tests found.

WORKING WITH AI AGENTS

- Used **Claude Code** as the normal way of working: directing an agent through implementation, then reviewing the result line by line and owning it as my own.
- Wrote the **project context and conventions** the agent works from, so the same mistake does not have to be corrected twice.
- Learned where not to delegate: anything touching access control, data integrity or a decision that needs a reason rather than a pattern.

Education

Comenius University Bratislava, Faculty of Management **2021 - 2026**

Master's degree. Specialisation: Managerial Informatics and Applied Digital Management

Master's thesis: change management in organisations during digital transformation, with a meal-ordering system designed and built as the practical part

Bachelor's thesis: redesign of a website built in WordPress

ARS STUDIO Private Art School, Fine Art Studio **2013 - 2020**

Seven years of drawing, composition, photography and graphic design, studied alongside regular schooling
